Education

UNIVERSITAS INDRAPRASTA PGRI South Jakarta, Indonesia
Bachelor of Science in Informatics Engineering *2022 - Present*

- **Concentrations:** Web Development, Algorithm Optimization, UI/UX Design Systems.
- **Relevant Coursework:** Advanced Back-end Development, Desktop Application Development, Data Structures, Algorithm Analysis.

SMK NEGERI 10 JAKARTA East Jakarta, Indonesia
Vocational High School Diploma in Software Engineering *2019 - 2022*

- **Concentrations:** Project Management, Mobile Development, Front-end & Back-end Engineering.

Technical Skills & Projects

Programming: PHP (Laravel), Go, Python (FastAPI), JavaScript, TypeScript, HTML, CSS, SQL.

Frameworks & Tools: Angular, Ionic, Vue.js, Bootstrap, Tailwind CSS, Docker, Nginx, Git, Postman, Android Studio.

Databases: PostgreSQL, MySQL.

Finansia: Personal Finance Management System Jan. 2025 - Present

- Architected and implemented a full-stack personal finance application leveraging a Laravel-based RESTful API backend and responsive front-end dashboard to securely track user transactions, budget targets, and monthly analytics.

E-Procurement Platform (Version 2.3.6) Apr. 2025

- Contributed to the core release cycle by implementing optimized multi-vendor bidding workflows, refining database integrity constraints, and resolving critical software performance bottlenecks during the staging phase.

Relevant Experience

PT SOLUSI INTEK INDONESIA Bekasi, Indonesia
Software Engineer / Quality Assurance Engineer *May 2022 - Present*

- Maintain and scale enterprise back-end architectures, API integrations, and robust database models using the Laravel framework for a suite of primary internal corporate web applications.
- Engineered cross-platform hybrid mobile and web applications utilizing Ionic and Angular, managing a unified shared codebase to guarantee seamless UI consistency and multi-platform compatibility.
- Orchestrate autonomous full-stack software deployments and infrastructure management using Nginx reverse proxies, environment tuning, and rigorous server configurations to secure optimal system performance.
- Execute continuous codebase refactoring, code reviews, and structured repository version control via Git to continuously enhance long-term software maintainability, modularity, and technical documentation quality.
- Conduct proactive application health monitoring, systematic performance auditing, and routine PostgreSQL/MySQL database optimization routines (backups, integrity checks) to defend system uptime and secure critical corporate data.

ADCONOMIC ADVERTISE West Jakarta, Indonesia
Web Developer *April 2021 - June 2021*

- Directed comprehensive technical maintenance, administration, and dynamic content updates for multiple client WordPress ecosystems, ensuring modern front-end user engagement and consistent server uptime.

- Formulated and deployed multi-layered organic SEO enhancement strategies, combining technical structural site optimization, in-depth keyword research, and metadata refinement to maximize search engine indexing and organic user acquisition.
- Generated detailed technical maintenance logs and analytical reports to quantify system performance metrics, delivering complete operational transparency and project accountability directly to external corporate clients.

Languages & Interests

Languages: Native Indonesian Speaker, Basic in English.

Interests: Artificial Intelligence, Mobile Device Automation (ADB/scrcpy), Server Infrastructure, Badminton.
